### **2G REMAINS ON ITS GROWTH TRAJECTORY**

2G Energy generated very high sales of €79m in Q3, an increase of more than 53% compared to the prior year quarter. In the first nine months, sales increased by 22% y/y to €193m. With Q4 being by far the strongest quarter of the year (Q4/21: €108m), 2G should achieve sales close to €310m, which is the upper end of the 2022 guidance range. Revenue guidance for 2023 is €310m - €350m, which is consistent with our estimate of €35m. For 2024, 2G now expects revenue of up to €390m at an EBIT margin of 8.5% to 10% (previously: €330m at 10% EBIT margin). We are close to the upper end of the 2024 guidance with our revenue forecast of €386m at an EBIT margin of 10%. We have slightly raised our 2022 forecast and see the company's 2023 & 2024 guidance as confirmation that 2G will continue to grow dynamically despite the recession. An updated DCF model still yields a €31 price target. We reiterate our Buy recommendation.

**Q3 sales increase by 53%** The high sales increase in Q3 is also attributable to the low prior-year figure of  $\in$ 51.5m. However, the 9-month revenue increase of 22% is also impressive, especially in the context of a significantly deteriorating macroeconomic environment (recession in H2/22, high inflation, energy crisis in Europe).

**Outlook for 2023 and 2024 brings clarity to 2G's growth outlook** Revenue guidance for 2023 of  $\leq$ 310m -  $\leq$ 350m means that, based on our 2022 estimate of  $\leq$ 305m, growth of up to 15% is possible. 2024 revenue of up to  $\leq$ 390m also suggests that double-digit growth is feasible the year after next. We note that 2G has given conservative guidance in recent years.

**Order intake remains at a high level despite the decline in Q3** Although order intake in Q3 fell by 14% y/y to  $\in$ 37.6m, it increased by 9% to  $\in$ 149.6m on a 9-month basis. Continued brisk demand for 2G CHP suggests further order intake growth in Q4. We estimate that the order backlog remains at a high level after 9 months despite the high sales in Q3 (order backlog at the end of H1:  $\notin$ 220.8m + order intake Q3:  $\notin$ 37.6m – Q3 sales:  $\notin$ 79m = approx.  $\notin$ 179m). Capacity utilisation should thus remain high well into the fourth quarter of 2023.

**Technology leadership in hydrogen CHP plants makes 2G products attractive to customers** 2G was an early adopter of hydrogen and offers customers the option to convert their 2G natural gas CHP plants to hydrogen in the future. This is proving to be an important selling point, as customers can switch from fossil natural gas to green hydrogen at any time.

**High gas prices more of an argument for than against natural gas CHP plants** The sharp rise in gas prices resulting from the Russian invasion in Ukraine has tended to stimulate demand for natural gas CHP plants, as high gas prices are outweighed by high electricity and heat prices, making the plants more economical. Especially when gas prices are high, the higher efficiency of CHP plants of up to 98% compared to the uncoupled production of electricity and heat is more significant, as the same amount of energy can be produced with less natural gas. A gas-fired power plant producing only electricity typically achieves an efficiency of about 40%, and combined-cycle plants about 60%.

Estimates for 2022 slightly increased As Q3/22 sales were €8.4m above our estimate, we have increased our annual targets and now assume sales of €305m at an EBIT margin of 7.2% (see figure 1).

#### **ASSET VALUATION SYSTEM**

First Berlin's system for asset valuation is divided into an asset recommendation and a risk assessment.

#### ASSET RECOMMENDATION

The recommendations determined in accordance with the share price trend anticipated by First Berlin in the respectively indicated investment period are as follows:

Category Current market capitalisation (in €)			2 > 2 billion	
		0 - 2 billion		
Strong Buy <sup>1</sup>	An expected favourable price trend of:	> 50%	> 30%	
Buy	An expected favourable price trend of:	> 25%	> 15%	
Add	An expected favourable price trend of:	0% to 25%	0% to 15%	
Reduce	An expected negative price trend of:	0% to -15%	0% to -10%	
Sell	An expected negative price trend of:	< -15%	< -10%	

<sup>1</sup> The expected price trend is in combination with sizable confidence in the quality and forecast security of management

Our recommendation system places each company into one of two market capitalisation categories. Category 1 companies have a market capitalisation of  $\geq 0 - \leq 2$  billion, and Category 2 companies have a market capitalisation of  $> \leq 2$  billion. The expected return thresholds underlying our recommendation system are lower for Category 2 companies than for Category 1 companies. This reflects the generally lower level of risk associated with higher market capitalisation companies.

#### **RISK ASSESSMENT**

The First Berlin categories for risk assessment are low, average, high and speculative. They are determined by ten factors: Corporate governance, quality of earnings, management strength, balance sheet and financial risk, competitive position, standard of financial disclosure, regulatory and political uncertainty, strength of brandname, market capitalisation and free float. These risk factors are incorporated into the First Berlin valuation models and are thus included in the target prices. First Berlin customers may request the models.
