

## 2G Energy strengthens its position in the BeLux market with the acquisition of Celsius & Watt

**Heek / Belgium, June, 08th 2026** – Since January 1st, we have been working behind the scenes to integrate capabilities, strengthen our local organisation, and align our market approach. With this foundation now in place, we are ready to share how this acquisition enhances our offering in the energy transition.

On January 1st 2026, 2G Energy acquired the Belgian energy company Celsius & Watt. This strategic step fits within 2G Energy's long-term vision to structurally anchor its presence in Belgium and Luxembourg, while establishing a strong local point of contact for high-quality technical and operational support.

Since its founding in 1995, 2G Energy has developed into an international technology leader in combined heat and power (20 kWe to 4.5 MWe). Today, the company acts as an integrated system partner for decentralized energy solutions, combining CHP installations, large heat pumps (88 kWth to 3.2 MWth), and hybrid energy concepts.

The energy transition is not evolving toward a single dominant technology, but toward integrated energy systems where flexibility, security of supply, and efficiency must work together. In this context, technological expertise alone is not sufficient. Local presence, service capacity, and a deep understanding of market-specific regulations are critical to ensure reliable implementation and long-term performance.

Celsius & Watt holds a strong market position in Belgium, with an extensive maintenance portfolio of CHP systems, expertise in high-capacity installations, and experience in residential and collective heating solutions. The company is recognized for its technical reliability and service-oriented approach.

For customers in the BeLux region, this means a single, locally anchored partner bringing together international technology and strong execution, with faster response times, dependable service, and integrated energy solutions.

For 2G Energy, it marks a step forward in strengthening its market position, expanding execution capacity, and building a scalable platform for future growth.

With the integration of Celsius & Watt, 2G Energy establishes a clear local anchor within its international organisation. Customers, partners, and institutional stakeholders benefit from one integrated point of contact for engineering, project realisation, monitoring, and long-term service.

Celsius & Watt will continue its activities under the name:

### **Celsius & Watt**

*a 2G Energy Company*

Existing service activities will be fully maintained, including support for both 2G and non-2G CHP systems. Collaboration with partners, installers, and EPC/EPCM companies remains a core element of the market approach.

This acquisition confirms 2G Energy's ambition not only to supply technology in the BeLux market, but to act as a long-term, locally embedded partner. By combining international technological strength with local execution capability, 2G Energy creates a solid foundation for sustainable growth in a market that increasingly demands reliability, flexibility, and operational excellence.

With this step, 2G Energy reinforces its role as a trusted system partner in the energy transition.
